ANY PLACE!

Brinks Pipe Lining is the answer to your most common pipe problems. Epoxy pipe lining is a system of creating a new pipe system inside your existing pipe. It requires us to bring a "mobile epoxy pipe factory" to your location and to use your existing plumbing system as a mold to create a new and longer lasting system than the original.

Our pipe restoration process works with just about any metallic piping, including:

- **Copper**
- **Black Iron**
- **Galvanized**
- **Viscous Clay Pipe (VCP)**
- **Cast Iron**
- **Steel**

50-75 year life expectancy!

Brinks Pipe Lining is a division of Brinks Investigation-Restoration Services, Inc., which is a full service plumbing and restoration company located in central San Diego servicing San Diego and surrounding counties.
